Emeritus Professor at the renowned Pasteur Institute in Paris,

Corresponding member, French Academy of Sciences

Member, German Academy of Sciences Leopoldina

Foreign member, Royal Society of London

Member of the European Academy of Microbiology

Foreign Member of the National Academy of Medicine (NAM), USA

Member, American Academy of Microbiology

Associated member of the Académie Nationale de Pharmacie, Paris

Commandeur of the Ordre national du Mérite.

Abstract:

The bacterial pathogen *Listeria monocytogenes* is well known for its amazing capacity to infect cells and tissues. *Listeria* is also a paradigm in RNA-mediated regulation. First, it coordinates expression of its major virulence factors by a thermosensor. In addition, it is a champion in ribo-regulation. Some riboswitches regulate the synthesis of non-coding RNAs in an original way to control metabolite utilization in the gut. Other riboregulators provide antibiotic resistance in presence of antibiotics. We also discovered a novel type of regulation by excludons. The talk will illustrate some of these fascinating RNA-mediated regulations.

摘要:

单核细胞增生李斯特菌 (*Listeria monocytogenes*, 以下简称李斯特菌) 不仅以其卓越的细胞和组织侵袭能力而闻名, 更已成为解析RNA介导基因调控的经典模型: 该菌借助温度感受子精确协同调节主要毒力基因的表达, 并凭借丰富的“核糖调控 (ribo-regulation)”手段脱颖而出——多种核糖开关通过独特机制调控非编码RNA的合成, 在肠道环境中精细分配代谢物; 特定核糖调控元件则在抗生素存在时赋予细菌耐药性。我们近期鉴定的全新RNA调控模式“excludon”进一步拓展了对李斯特菌基因表达层级的认识。本次分享将系统阐述这些引人入胜的RNA介导调控策略, 展示其在病原菌生物学与代谢适应中的关键作用。
